### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: No prior art has been found or presented that either teaches or fairly suggests the manufacture of molded articles for interior car parts comprising a polypropylene resin composition comprising components (A) to (D)

**Polypropylene (A):**

5.0 to 30 % by mass of a crystalline homopolypropylene having an MFR of 500 to 3,000 g/10 min. determined by a melt flow rate measurement at 230°C under 21.6 N load and a fraction soluble in boiling p-xylene of 6.0 % by mass or less;

**Polypropylene (B):**

10 to 50 % by mass of a polypropylene comprising a crystalline homopolypropylene (B<sup>1</sup>) and an ethylene-propylene copolymer rubber (B<sup>2</sup>), said ethylene-propylene copolymer rubber (B<sup>2</sup>) having an intrinsic viscosity of 4.0 to 7.0 dl/g at 135°C in decalin and a content of ethylene of 45 % by mass to 80 % by mass, and said polypropylene (B) comprising said ethylene-propylene copolymer rubber (B<sup>2</sup>) in an amount of at least 10 % by mass;

**Polypropylene (C):**

5.0 to 30 % by mass of a polypropylene comprising a crystalline homopolypropylene (C<sup>1</sup>) and an ethylene-propylene copolymer rubber (C<sup>2</sup>) said ethylene-propylene copolymer rubber (C<sup>2</sup>) having an intrinsic viscosity of 5.0 to 10 dl/g at 135°C in decalin and a content of ethylene of from 25 % by

mass or more to below 45 % by mass, and said polypropylene (C) comprising said ethylene-propylene copolymer rubber (C<sup>2</sup>) in an amount of at least 10 % by mass;

Ethylene- a -olefin copolymer rubber (D):

5.0 to 40 % by mass of an ethylene- a -olefin copolymer rubber having an MFR of 0.1 to 1.0 g/10 min. as determined by a melt flow rate measurement at 230°C and 21.6 N load, a content of ethylene of 50 % by mass to 80 % by mass, and a comonomer sequencing distribution of 1.0 to 2.0 determined by <sup>13</sup>C-NMR," as recited and claimed.

The references to Berta, Laughner et al, Yu et al, Pellegatti et al and Jung et al, all newly cited of interest, teach the manufactures of resin blends similar in scope to that recited and claimed herein. Neither reference teaches or suggests the specific combinations of constituents as herein claimed. As such, neither reference is deemed to present a bar to the patentability of the instant claims. Note the Abstracts and disclosures of each cited reference.

Since there are no other outstanding issues with regard to the enablement or clarity of the instant claims, these claims are deemed to contain allowable subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
